

Java

```
class Solution {  
    public List<List<Integer>> filterOccupiedIntervals(int[][] occupiedIntervals, int freeStart, int freeEnd) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[][]} occupiedIntervals  
 * @param {number} freeStart  
 * @param {number} freeEnd  
 * @return {number[][]}  
 */  
var filterOccupiedIntervals = function(occupiedIntervals, freeStart, freeEnd) {  
  
};
```

TypeScript

```
function filterOccupiedIntervals(occupiedIntervals: number[][], freeStart: number, freeEnd: number): number[][] {  
  
};
```

C++

```
class Solution {
```

```
public:
    vector<vector<int>> filterOccupiedIntervals(vector<vector<int>>& occupiedIntervals, int freeStart, int freeEnd) {

    }
};
```

C#

```
public class Solution {
    public IList<IList<int>> FilterOccupiedIntervals(int[][] occupiedIntervals, int freeStart, int freeEnd) {

    }
}
```

Kotlin

```
class Solution {
    fun filterOccupiedIntervals(occupiedIntervals: Array<IntArray>, freeStart: Int, freeEnd: Int): List<List<Int>> {

    }
}
```

Go

```
func filterOccupiedIntervals(occupiedIntervals [][]int, freeStart int, freeEnd int) [][]int {

}
```
